PROJECT CHARACTERISTICS

Plushusene is a co-living housing concept developed by NREP and CASA Group. They are the representation of what we can call a 'multi-generational living', where peace of mind, close relationships and a sense of belonging across generations are essential. Their aim is to combine the best elements of traditional co-housing schemes to the modern resident's need for freedom, space and individual requirements by being "close to what is important".

Plushusene consist of row houses, apartments and shared facilities. The tables are decorating the café area and the Communal House, which serves as a unifying meeting place for all residents. Thus, Re-Plastic contribute to a sustainable way of living in the future.
